

Orchestration of multi-layer flood risk management

pilot areas for smart combinations of measures for flood risk management

Introduction of evaluation framework for water-robust organisation (area liable to flooding) of special vital and vulnerable functions (all of the Netherlands)

Likelihood of a water-robust organisation (limitations are indicative):

Area inside the dykes liable to flooding

- depending on local situation
- limited opportunities
- spatial aspects of disaster management useful (vertical evacuation or to shelters) on account of limited evacuation options

Area outside the dykes liable to flooding

Make all towns and cities climate-proof, elaborate necessary agreements and tools in the 2015-2020 period

urban area, climate-proof organisation required (selection on map is indicative and not exhaustive)
